

Java Applet Solution

-This is the Error message coming up:

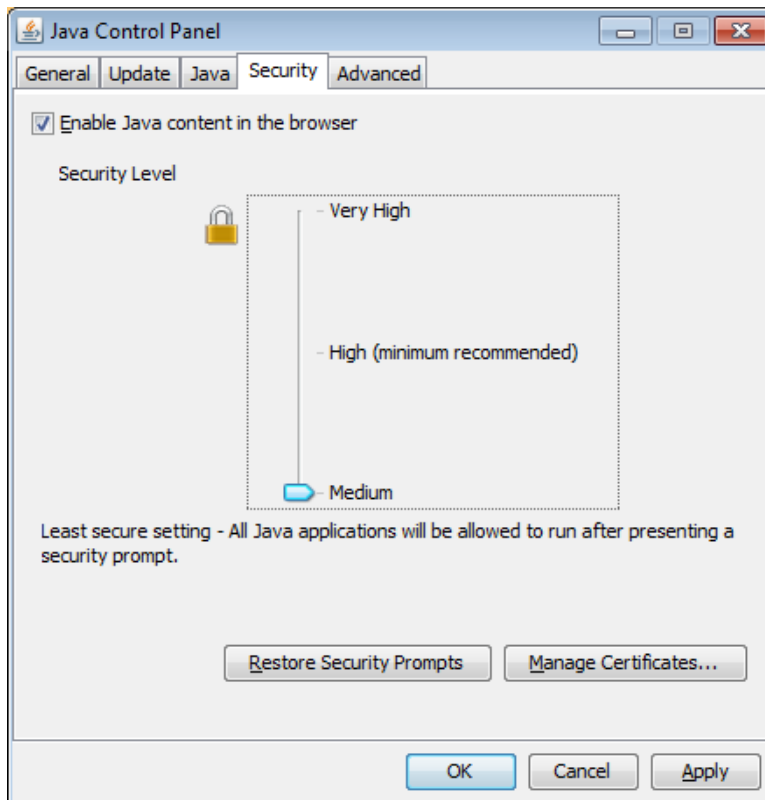

Fix:

-Click on the start button in lower left-hand corner. Type "Configure Java" in the Search Program and Files window.

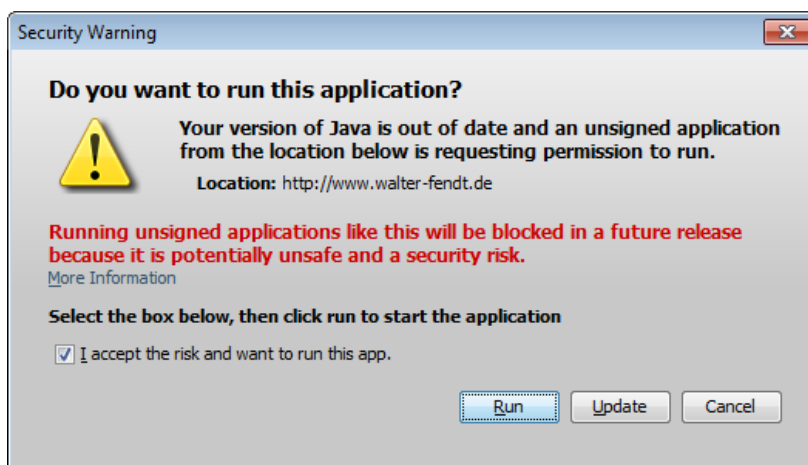

-Click on "Configure Java"

-On the “Security” tab, set the Security Level to “Medium” instead of High, and click Apply and OK.

-Open your website, and checkmark the “I accept the risk and want to run this app.” on the Security Warning pop up, and then click on “Run”

-The Java applet than runs as it should and opens the graphic.
